

# Stand Up #2 - Car Color Changer

This week, I made significant progress in enhancing the **user experience and performance** of the project. I improved **UI responsiveness**, ensuring that the website functions smoothly across **mobile, tablet, and desktop devices**. Additionally, I refined **color transition animations**, making them more fluid and visually appealing.

I also worked on **optimizing the fun fact generator**, preventing repeated facts and ensuring each interaction feels fresh and engaging.

Next, I want to:

- **Fine-tune the mood-based color selection**, ensuring that the themed palettes are consistent across all devices.
- **Implement local storage support**, so users can retain their last selected colors even after refreshing the page.
- **Conduct cross-browser testing**, making sure the app performs well on different platforms.

Excited to finalize these improvements and prepare for deployment!
