

Stand Up #1 - Car Color Changer 🚗🎨

This week, I finalized the core features and functionality of the project. I implemented the front-end with a working color-changing car and background sync, making the experience interactive. Additionally, I added a fun fact generator, which updates with every color change, adding a quirky and engaging touch to the app.

Next, I want to focus on:

- Improving UI responsiveness for mobile devices to ensure a smooth user experience across all screen sizes.
- Refining animations for seamless color transitions and enhanced visual appeal.
- Ensuring that the mood-based color selection works consistently across all devices.

Looking forward to making these improvements and polishing the app further! 🚀
